The Industrial Revolution was the transition to new manufacturing processes in Europe and the US, in the period from about 1760 to sometime between 1820 and 1840. This transition included going from hand production methods to machines, new chemical manufacturing and iron production processes, the increasing use of steam power and water power, the development of machine tools and the rise of ...Economic History of Tractors in the United States. William J. White, Research Triangle Institute. The farm tractor is one of the most important and easily recognizable technological components of modern agriculture in the United States. A ship is a large watercraft that travels the world's oceans and other sufficiently deep waterways, carrying passengers or goods, or in support of specialized missions, such as defense, research and fishing. Historically, a "ship" was a sailing vessel with at least three square-rigged masts and a full bowsprit. Ships are generally distinguished from boats, based on size, shape, load capacity ...Born 27 Mar 1863; died 22 Apr 1933 at age 70. quotes English industrialist who, having met Charles Rolls, in May 1904, found they shared a common interest to manufacture and market the finest cars. Together, in 1906 they started the company, Rolls-Royce Ltd. Within a few years, at the onset of WWI, they turned to the production of much-needed reliable engines for aviation. - Early Stationary Steam Engines In America: A Study In The Migration Of A Technology.
