2.3. Data analysis. As there was considerable heterogeneity among the studies regarding sample size, variables of interest, analytic approach, and in comparisons between different CBT-related and non-CBT related treatment protocols, a systematic, narrative review of the literature was considered to be the most suitable approach to address the current set of research questions. Hodgson SF, Watts NB, Bilezikian JP, et al. .American Association of Clinical Endocrinologists medical guidelines for clinical practice for the prevention and treatment of postmenopausal osteoporosis: 2001 edition, with selected updates for 2003. Relationships With Industry and Other Entities—The ACC and AHA exclusively sponsor the work of GWCs, without commercial support, and members volunteer their time for this activity. The Task Force makes every effort to avoid actual, potential, or perceived conflicts of interest that might arise through relationships with industry or other entities (RWI). The majority of studies included in this review were published in the last seven years (66% n = 80) and in English (99% n = 120), with one study published in Spanish (Castro, 2005). Most of the studies used a cross-sectional study design (78% n = 94). Of these, 12 were cross-sectional analyses from a longitudinal study although longitudinal analysis was not reported. - Pre Test Self Assessment And Review Medicine Clinical Science Series
