

Download Who Medical Eligibility Criteria Wheel For Contraceptive Use

This wheel contains the medical eligibility criteria for starting use of contraceptive methods, based on Medical Eligibility Criteria for Contraceptive Use, 5th edition (2015), one of WHO's evidence-based guidelines. It guides family planning providers in recommending safe and effective contraception methods for women with medical conditions or medically-relevant characteristics. This document is part of the process for improving the quality of care in family planning. Medical eligibility criteria for contraceptive use (MEC), the first edition of which was published in 1996, presents current WHO guidance on the safety of various contraceptive methods for use in the context ... These resources support Quality Family Planning recommendations related to the provision of contraceptive services for clients who wish to delay or prevent pregnancy. Global preterm birth estimates. Preterm birth is the leading cause of death in children under five worldwide. While preterm survival rates have increased in higher-income countries, in many low- and middle- income countries (LMICs) preterm newborns still die due to a lack of adequate newborn care. - Who Medical Eligibility Criteria Wheel For Contraceptive Use
